FASTENERS, THE
UNSUNG HEROES OF
THE ENGINEERING
WORLD

Whenever it comes to the fasteners, this famous idiom strikes a chord,

For want of a nail the shoe was lost, for want of a shoe the horse was lost, for want of a horse the knight was lost, for want of a knight the battle was lost.

Be it a door hinge, home appliances, automobiles, machineries, bridges or aircrafts, all are held together by fasteners. It is one of the most important hardware components used nearly everywhere. Imagine the consequence if a single fastener loosens up or breaks down, no matter how good the other components are, the entire system is bound to collapse.

Yet most people tend to overlook its criticality since it is a low value item, seems non technical and is often the last

item on their shopping list. The purchase department seldom gives importance to procurement of fasteners. What's intriguing is that though fasteners comprise less than 1% of the total value of the product, it's unavailability at time of need is cited as the number one bottleneck in most production lines.

The changing role of fastener suppliers:

Many people think a nut is a nut, or a screw is a screw. This could not be farther from the truth, proper selection of fasteners goes a long way in boosting productivity, by choosing the right fasteners, you will save time in labour and service life of the equipment or structure. Beyond cost, there are at least 5 aspects one needs to consider before selecting the right fastener. These are Strength, Durability, Performance, User Friendliness and Availability. However, obsession with lower prices and lack of technical know-how cause many companies to overlook these factors, which eventually lands them in undesirable scenarios. Therefore, the need of the hour are suppliers who play the role of solution providers, who suggest the right product, produce within the right cost, and make it available at the right time.

Since 1992, Mita Fasteners Pvt. Ltd. led by Mr. Deepak Shah have been doing exactly that by providing customers with high precision fastening solutions and cold forged components. At their world-class manufacturing plant at Wada, they manufacture and market High Tensile and Stainless Steel Fasteners of a range of grades, sizes and passivity as per defined standards. They specialize in customized and special

fasteners that are made as per customers' specific drawings/ requirements.

Customers adore our obsession with quality. We have an absolute control over quality owing to all critical processes being in-house and rigorous QC mechanisms

Why are Customers Nuts about Mita Fasteners?

It is a wonder to find quality obsessed German, Finnish and Swiss Companies relying blindly on Mita Fasteners, such is the trust they command. CEO Mr. Deepak Shah states, "Customers adore our obsession with quality. We have an absolute control over quality owing to all critical processes being in-house and rigorous QC mechanisms. We practice Six Sigma Methodologies and are certified for IATF16949 as well as ISO 9001:2015 from DQS."

Customers don't have the headache of handling multiple vendors since Mita Fasteners provides all fastening and cold forge solutions under one roof. What's more, they can operate at minimal inventory owing to low MOQs and the lowest lead times offered.

Mita Fasteners ensures that for the want of a fastener, your business will never suffer. [In](#)
